

CLOTH FACE COVERINGS GUIDELINES

According to the CDC (Centers for Disease Control), the COVID-19 virus can spread between people interacting in close proximity—for example, speaking, coughing, or sneezing—even if those people are not exhibiting symptoms. As part of the essential effort to slow the spread of COVID-19, Michigan State University is directing everyone to take personal responsibility to protect the health and safety of all MSU faculty, staff, students and visitors. Face coverings are a crucial public health measure and help protect others by reducing exposure to droplets if someone is unknowingly infected with COVID-19. Face coverings must be worn by anyone who is **not** fully vaccinated (including all faculty, staff, students, vendors, and visitors) indoors while you are on property owned or governed by MSU and while participating in MSU-related or MSU-sponsored activities. If you are fully vaccinated, which means at least two weeks have passed since you received the final dose of an FDA-approved or FDA-authorized COVID-19 vaccine you are not required to wear a face covering while indoors. Please note that even if you are fully vaccinated, you must continue to wear a face covering when you are in a healthcare setting where patients may be present. The most recent and complete face covering requirements can be found in the [COVID Directives](https://msu.edu/together-we-will/msu-community-compact/directives.html#face-coverings-directives) <<https://msu.edu/together-we-will/msu-community-compact/directives.html#face-coverings-directives>>. If you have a medical condition that may prevent you from safely wearing a face covering, you should contact MSU's Resource Center for Persons with Disabilities to begin the accommodation process.

It is critical to emphasize that frequent handwashing and routine cleaning and disinfection remains important to slowing the spread of the virus. Individuals who are not fully vaccinated must also continue to maintain 6-feet of physical distancing to help slow the spread of the virus. CDC is additionally advising the use of simple **cloth face coverings** to slow the spread of the virus and help people who may have the virus and do not know it from transmitting it to others. While these provide the wearer some protection from external sources, they are primarily designed **to protect others**, in case the wearer is infected, since individuals may be contagious while being symptom free.

FACE COVERING MATERIAL AND CONSTRUCTION

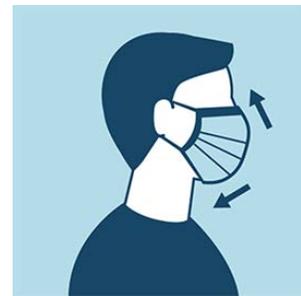

The cloth face coverings recommended are not surgical masks or N-95 respirators. Those are critical supplies that must continue to be reserved for healthcare workers and other medical first responders, as recommended by CDC guidance. These coverings should be constructed of washable, multilayer, breathable materials such as cotton. Instructions are available on CDC website. Homemade face coverings are perfectly acceptable.

- Do not share face coverings. Having multiple coverings may also be helpful when one needs to be laundered.
- Do not wear a cloth face covering if it impedes proper use of other essential PPE
- Do not wear a cloth face covering if it can be entangled in machinery or when using flammable materials
- Do not use cloth face coverings with an exhalation valve as this allow droplets expelled while exhaling to freely flow out of the mask and therefore is no longer protecting others.

HOW TO WEAR A CLOTH FACE COVERING

Cloth face coverings should:

- fit snugly but comfortably against the side of the face
- be secured with ties or ear loops
- include multiple layers of fabric
- allow for breathing without restriction
- be able to be laundered and machine dried without damage or change to shape

Employees should avoid the urge to touch their face without first washing their hands. Face coverings can increase the desire to touch the face more than normal.

CLEANING FACE COVERINGS

Face coverings should be washed routinely, meaning every other day or daily preferably, depending on the frequency of use. They should be washed in a washing machine with soap and the hottest appropriate water temperature setting. They should be machine dried completely and at the highest heat setting. These will not be laundered at MSU laundry.

STORING AND TRANSPORTING FACE COVERINGS

Keep in a plastic bag or similar container that prevents it from becoming contaminated while not being worn. Leave container unsealed to allow for drying if reuse prior to cleaning is necessitated by an extraordinary circumstance. Have a designated spot to store the covering especially when you are not able to wash it immediately.

DONNING AND DOFFING FACE COVERINGS

1. Wash hands with soap and water for at least 20 seconds before and after donning cloth face coverings. If unable to wash hands, employees should use hand sanitizer with at least 60% alcohol.
2. Avoid touching the inside surface of face covering when donning. If the inside of a person's face covering becomes contaminated, it provides a pathway for the virus to reach the face.
3. Ensure the covering is positioned securely when donning to minimize the need for adjustment during wearing. Fit the covering as tightly as possible while being able to breathe comfortably.
4. When an employee must remove their face covering to eat, drink, etc., or adjust during use, they should take the following steps:
 - a. Wash hands, as described in step 1
 - b. Place in plastic bag for storing
5. Individuals should be careful not to touch their eyes, nose, and mouth when removing their face covering and wash hands immediately after removing.

June 2021 Updates:

- Masks are no longer required to be worn outdoors by anyone
- Masks continue to be required indoors by individuals who are not fully vaccinated. Masks are not required to be worn indoors by fully vaccinated individuals. Masks are required when you are in a healthcare setting where patients may be present, even if you are fully vaccinated.
- Physical distancing continues to be required by individuals who are not fully vaccinated.
